

DISCOVERY LECTURE SERIES

Presented by AltaSea & Cabrillo Marine Aquarium

RETURN OF THE BIG MARINE PREDATORS TO CALIFORNIA WATERS: *A Sign Things Might be Getting Better*

CHRISTOPHER G. LOWE, PH.D.

FRIDAY, MAY 9 • 7-9pm • JOHN M. OLGUIN AUDITORIUM

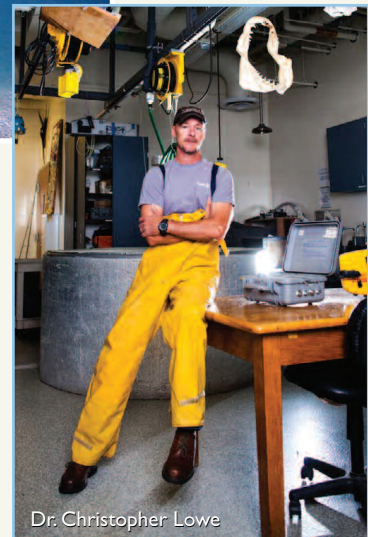

Sharks serve as the canaries of the sea with their status reflecting the health of the greater ocean ecosystem. As apex predators, sharks typically have smaller populations and unique life-cycle characteristics that make them extra vulnerable to the consequences of overfishing, habitat-loss and pollution.

Since the 1970s, many laws and regulations have been put in place to reduce human impacts and repair damage we have caused to coastal ocean ecosystems. Yet, we're constantly bombarded with "doom and gloom" messages about the state of the oceans.

Are all our efforts paying off? • Fee: Free

DISCOVERY LECTURE SERIES

2014 & 2015

The aquarium is collaborating with our new "neighbor," the world-class urban marine research and innovation center, AltaSea. The 35-acre campus at the Port of Los Angeles will be dedicated to uniting global marine research, education, business, government philanthropy and community. To start things off, we will be having a Discovery Lecture Series in 2014 and 2015.

2014 LECTURES:

- May 9 - Dr. Chris Lowe, CSULB
 - August 1 - Dr. Shawna Dark, CSU Northridge
 - October 3 - Dr. Rich Ambrose, UCLA
 - December 5 - Dr. Shana Goffredi, Occidental College
- Visit our website for more details.
