

DISCOVERY LECTURE SERIES

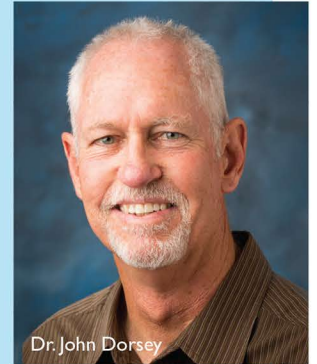

Presented by Chicken of the Sea and Cabrillo Marine Aquarium

“TEAMING WITH NATURE IN MANAGING URBAN RUNOFF: MORE BANG FOR THE BUCK!”

DR. JOHN DORSEY
LOYOLA MARYMOUNT UNIVERSITY

FRIDAY, FEBRUARY 1 • 7-9pm
CABRILLO MARINE AQUARIUM
JOHN M. OLGUIN AUDITORIUM

People receive many benefits from ecosystems (termed ecosystem services), for example, pest control, food and fiber production, climate regulation, recreation and aesthetics, and water purification and cycling. An essential ecosystem service for urban areas is water purification and supply, especially in dealing with contaminated runoff and replenishing of groundwater for drinking water supplies. Research in the Ballona Creek Watershed on local natural and constructed wetlands will be discussed demonstrating the effectiveness of these biological systems not only to purify polluted runoff but to enhance groundwater supplies.

Dr. John Dorsey

Dr. John Dorsey is a Professor at Loyola Marymount University, Los Angeles, in the Department of Civil Engineering & Environmental Science where he teaches courses in environmental, biological and marine sciences.

Friends of Cabrillo Marine Aquarium hosts a members-only reception before each lecture. To join, please call: (310) 548-7562 x205.
